

Introduction to Software Engineering – laboratory no 5

User Interface Prototype

1. For 2 use-cases for which you prepared textual specification (Lab 3, ex. 3) propose user-interface prototypes together with navigation map (3 points per each).
2. When preparing the user-interface prototype in task 1 follow guidelines proposed for specific platform (e.g. User Experience Interaction Guidelines for Windows 7 and Windows Vista). Do that for at least 4 elements (1 point for each, max 4 points). Document the fact that some guidelines were applied by copying the proper parts of guidelines to the solution, e.g.

Guidelines

Presentation

- Sort list items in a logical order, such as grouping related options together, placing most frequently used items first, or using alphabetical order. Sort names in alphabetical order, numbers in numeric order, and dates in chronological order. Lists with 12 or more items should be sorted alphabetically to make items easier to find.
